#### Instructions:

- Approved calculators may be used.
- All necessary working is to be shown for Part C.
- Marks may be deducted for careless or poorly arranged work.

#### PART A: **Multiple Choice Questions:**

10 marks

For questions 1 - 10, circle the correct answer, A, B, C or D on the answer sheet provided.

- Simplify the following giving your answer in exact form  $\sqrt{54}$ 1.
- 19 x 56

- (A) 7.35
- 3√6
- (C)  $6\sqrt{3}$
- (D) 10.39
- Write in gradient-intercept form 3y-6x+15=0 3y=6x-15 y=2x-52.

$$3y = 6x - 15$$

- (A) y = 2x + 5
- y = 2x 5 (C) y = -2x + 5
- (D) y = -2x 5
- Write the following using positive indices  $\frac{x^{-2}}{5v^{-5}}$   $\sqrt[7]{}$   $\frac{\sqrt[5]{5}}{8v^{-2}}$ 3.
  - (A)  $\frac{x^2}{5v^5}$

- 2 7 (8) 8 10 11 14 (8) 19 20 (C) 18 (D) 105 Calculate the IQR for the set of Quiz scores 2, 7, 11, 20, 8, 8, 10, 18, 19, 14 4.

- (A)
- 10

- - 10R = 18-8

- 5. Factorise the following quadratic expression  $4x^2 + 2x$ 
  - (A) 2x(2x+1)
- (B) x(4x+2)
- (C) 2x(2x+2)
- (D) 2x(2+x)

6. Expand (x+8)(x-3)

x2-3x+8x-24

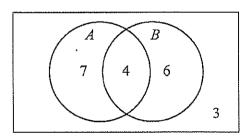

- (A)  $x^2 11x + 24$  (B)  $x^2 + 5x 24$  (C)  $x^2 + 5x + 24$  (D)  $x^2 5x 24$

Simplify  $(2a^3)^2 \times 3a^0$ 7.

496 x 3(1)

- (A) 12a<sup>5</sup>
- (B)  $4a^6$
- (C)  $12a^6$
- (D)  $4a^5$

8. From the Venn Diagram, calculate P(A and B)

- (C)  $\frac{17}{20}$

- (D)  $\frac{1}{4}$
- 9. Write 2 998 765 in scientific notation to 3 significant figures.

2.99/8765 × 10 6

- (A)  $3 \times 10^6$
- (B)  $2.99 \times 10^6$
- (C)  $3.00 \times 10^{-6}$
- (D) 3.00×10<sup>6</sup>
- A standard 6-sided dice is rolled. Calculate P(Prime Number).

& 1,600 4,0,6}

- (C)  $\frac{1}{3}$
- (D)  $\frac{1}{6}$

## PART B:

MCR

PLU

Short Answer Questions: 10 questions. All questions are worth one mark.

10 marks

1. Factorise y(x-1)-(x-1)

$$(y-1)(x-1)$$

2. Simplify  $10\sqrt{7} + 3\sqrt{2} - 9\sqrt{2}(-\sqrt{7})$ 

3. Calculate the midpoint of the interval joining points (1, -1) and (-3, 7).

$$M\left(\frac{1+(-3)}{2}, -\frac{1+7}{2}\right)$$

$$M(-1,3)$$

4. A coin is flipped 80 times and a head appeared 25 times. Based on these results, how many heads would you expect if the coin was flipped another 1200 times.

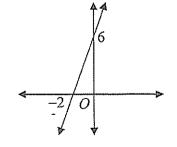

$$P(H) = \frac{25}{80} \times 1200$$

$$= \frac{5}{16} \times 1200$$

$$= 3.75$$

5. What is the equation of the following line

$$y = 3x + 6$$
.

6. Factorise 4yz + 15 + 3z + 20y

$$= 4yz + 3z + 15 + 20y$$

$$= z(3+4y) + 5(3+4y)$$

$$= (z+5)(3+4y)$$

7. Factorise  $e^2 - 5e - 14$ 

$$(e+2)(e-7)$$

8. Write without using fractional indices  $(x^{\frac{3}{2}})^{\frac{1}{2}}$ 

$$= x \frac{3}{x} \times \frac{1}{2}$$

$$= x^{3}/4$$

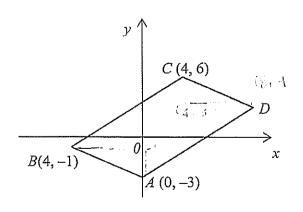

$$= 4 \sqrt{x^{3}}$$

9. Factorise  $x^2 - x + \frac{1}{4}$ 

$$\left(x-\frac{1}{2}\right)\left(x-\frac{1}{2}\right)$$

10. ABCD is a parallelogram. Find the coordinates of D.

(8,4)

## PART C:

NAME:

TEACHER: IMO GON MCR PLU

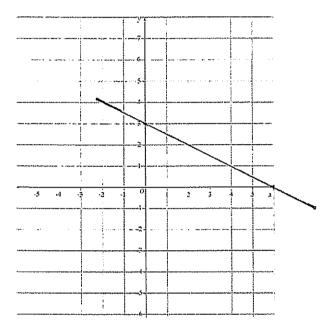

## Extended Response Questions:

All necessary working is to be shown for Part C. Marks indicated for each question.

24 marks

1. a) Sketch the line 
$$y = \frac{-x}{2} + 3$$

2

b) Find the equation of the line parallel to 
$$y = \frac{-x}{2} + 3$$
 and through the point (-2, -1)

$$M_1 = M_2$$
 $y = M_{2} + b$ 
 $-1 = -\frac{1}{2}(-2) + b$ 
 $b = -2$ 
 $y = -\frac{1}{2}x - 2$ 

### 2. Simplify:

a) 
$$(4m-3)(4m+3)-(4m-3)^2$$
  
=  $16n^2-9-(16m^2-24n+9)$   
=  $16n^2-9-(6m^2+24n-9)$   
=  $24n-18$ 

b) 
$$\frac{x^{2}z}{2^{2}y^{5}} \cdot \frac{14}{y^{3}z^{2}}$$

$$= \frac{4z}{x^{2}y^{5}} \times \frac{14z^{2}}{y^{3}}$$

$$= \frac{4z}{x^{2}y^{5}} \times \frac{y^{3}}{14z^{2}}$$

$$= \frac{2}{7x^{2}y^{2}}$$

2

3. Factorise 
$$10 + 33y + 20y^2$$

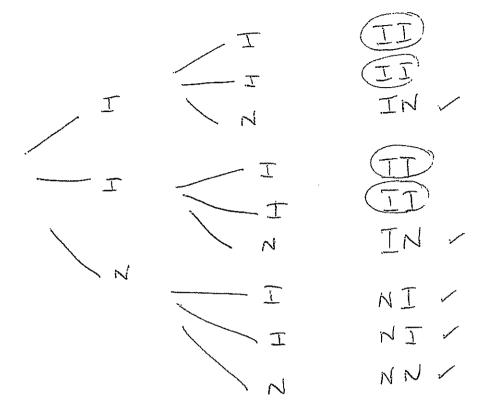

4. A medical study shows that two out of every three teenagers are immune to the chickenpox. Two teenagers are chosen at random.

2

1

1

a) Draw a tree diagram representing all outcomes.

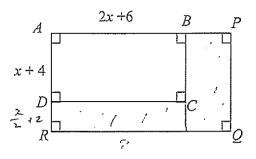

b) Find the probability that both teenagers chosen are immune.

$$P(II) = \frac{2}{3} \times \frac{2}{3}$$
$$= \frac{4}{9}$$

c) Find the probability of choosing at least one teenager that is not immune.

5. Mr O'Neill's backyard is being renovated. His current back deck ABCD is (x + 4) cm wide and (2x + 6) cm long. He has decided to increase both the length and width by 50%, giving APQR.

3

2

a) Find the area of APQR in terms of x.

$$(3x+9)(\frac{3x}{2}+6)$$

$$= \frac{9x^2}{2} + 18x + \frac{27x}{2} + 54$$

$$= \frac{9x^2}{3} + \frac{63x}{3} + 54$$

b) Show that the difference between the areas of the two rectangles is  $\frac{5}{2}x^2 + \frac{35}{2}x + 30$ 

$$\frac{\left(9x^{2} + 63x + 54\right) - (x+4)(2x+6)}{2^{2} + 63x + 54 - (2x^{2} + 6x + 8x + 24)}$$

$$= \frac{9x^{2} + 63x + 54 - (2x^{2} + 6x + 8x + 24)}{2}$$

$$= \frac{9x^{2} + 63x + 54 - (2x^{2} - 14x - 24)}{2}$$

$$= \frac{5x}{2} + \frac{35x}{4} + 30$$
The original dealer area was 40 m<sup>2</sup> by trial and array or otherwise. Find how much

c) If the original decks area was 40 m<sup>2</sup>, by trial and error or otherwise, find how much extra area has been added from the renovation.

$$(2x+6)(x+4) = 40m^{2}$$
If  $x=0$   $A = 6x4 = 24m^{2}$ 

$$x = 1$$
  $A = 8x5 = 40m^{2}$
